PRESS RELEASE

New UV/IR Flame Detector

March 15, 2005 -- The new **Model 3300 Series UV/IR Flame Detector** is designed for indoor use in areas that do not have a hazardous area classification such as commercial applications like warehouse, exhibit hall or office spaces. Its compact size and ease of installation makes it ideal for these applications. It utilizes proven UV/IR (Ultraviolet/Infrared) technology for the tested reliability and false alarm avoidance demanded in this industry. This FM approved Flame Detector meets the tough environmental and operational conditions.

The Model 3200 easily adapts to most standard fire suppression systems and wet bench systems. It utilizes relay output for alarm and trouble and does not require special controllers or wiring/junction boxes. The state-of-the-art microprocessor detector can recognize different types of flame signatures while rejecting false alarms. It also provides 120° field of view and is tested to respond to a 4-inch diameter isopropyl alcohol fire at 8 feet.

Sierra Monitor has long been known as a leader in the hazardous gas and fire detection business, with reliable products, top quality customer service and offices around the world. The new 3300 Series Flame Detector is the latest addition to a product line designed to meet the safety and quality needs of instrumentation and safety professionals.
