PRESS RELEASE

New Hydride Gas Monitor

January 15, 2005 -- The Hydride Gas Monitor, CM98-411, is a continuous duty, low cost stationary monitor for detection for Hydride gas. The monitor has a green LED indicating the unit is on and in a safe condition. A red LED will light when the unit is in alarm. The 1 amp relay will activate when the gas concentration exceeds 5 ppm Silane. This relay is latching which means that the relay will stay activated until it is reset with the switch on the side of the monitor.

The monitor is an aluminum enclosure that is suitable for most applications. Test connections and adjustment controls are located on the outside of the enclosure and are easily accessible.

The CM98-411 is designed to monitor for Silane in the range of 1-50 ppm with an alarm setpoint at 5 ppm Silane.

For further information contact Stephen R. Ferree, Vice President of Marketing, Sierra Monitor Corporation, 1991 Tarob Court, Milpitas, CA 95035, 408-262-6611., toll free: 800-727-4377
