For Immediate Release

Sierra Monitor Gas Detection System Featured at WEFTEC 2008

July 17, 2008 – Sierra Monitor Corporation is a leader in hazardous gas detection systems used in the Wastewater Treatment industry to monitor for combustible gases, oxygen deficiency and toxic gases. These systems will be on display in booth 26216 at the WEFTEC.08 in Chicago October 18-22.

Gas detection is an important safety tool for wastewater treatment plants. Combustible gases build up in wet wells and digesters, lack of oxygen in enclosed spaces are dangerous to personnel and various toxic gases including Carbon Monoxide, Hydrogen Sulfide and Chlorine are present in various locations. While portable detectors are necessary to protect individuals, fixed gas detection systems are necessary to protect all areas of the plant to prevent hazardous conditions that can cause both plant and personnel dangers.

On display at WEFTEC will be the new IT Series network-enabled gas detectors, the most comprehensive gas detectors available, featuring user-friendly digital display, 4-20 mA output, RS-485 Modbus output, integral relays, SentryBus output and extensive self-diagnostics for reliable accurate monitoring. The IT Series meets the user needs in integrated gas monitoring with plant-wide safety monitoring.

The 4501 Series 2-wire gas detectors provide low-cost installation with feature-rich capability including digital display, self-diagnostics and 4-20 mA output.

About Sierra Monitor Corporation

Sierra Monitor Corporation has been a manufacturer of ambient hazardous gas monitoring systems for over 25 years. With over 16,000 installations of fixed gas monitoring systems and access to the world's best gas sensor technologies, Sierra Monitor is a leader in hazardous gas detection systems. Sierra Monitor's Sentry Gas Risk Management System has always been a leader in data handling for hazardous gas monitoring systems for over 15 years. **First** with digital 2-way communication bus from sensors to controller, **first** with serial Modbus communication output for plant-wide systems, **first** with the ability to interface to other sensors and devices and now **first** to offer a cost-effective web-based graphical system for monitoring plant-wide hazardous gas conditions.
