

Meeting Your Hazardous Gas Monitoring Challenge

www.sierramonitor.com

Fixed Installation, Combustible, Oxygen and Toxic Gas Detection

Your challenge is to meet government mandated plant-wide hazardous gas safety requirements and insure that there is full documentation of your company's due diligence in providing a safe workplace. You need gas monitoring systems which have an excellent reliability reputation and low cost of ownership.

What if - plant-wide hazardous gas monitoring information was readily available at your central control station?

What if - you could reduce installation costs through digital communications from the field sensors to the controller?

What if - you could provide local display and alarm relays conveniently without compromising on sensor location?

What if - you could easily link to other devices important to the hazardous gas detection systems?

Would you be a budget hero?

Go to www.sierramonitor.com for complete details on how the Sentry Gas Risk Management System can help you meet those gas detection challenges.
