## SIERRA MONITOR -- COMPANY PROFILE

Located in California's Silicon Valley, Sierra Monitor offers the highest quality products to help telecommunication firms improve the reliability and efficiency of remote sites while reducing energy and maintenance costs. With over 20 years of industry experience, Sierra Monitor is an industry leader in the monitoring and control of remote telecommunications facilities.

Sierra Monitor's monitoring and control products are relied upon by virtually every major telecommunications company.

- The Model 2400 Vault Monitor, introduced in 1984, is the industry standard for providing continuous, reliable gas detection for Controlled Environment Vaults (CEV's) ensuring personnel and facility safety.
- The Model 2450 Environment Controller, used to monitor HVAC, safety and security in CEV's and Walk-in cabinets is installed in over 90% of all new CEV's deployed since its introduction in 1996.
- The Model 2430 Lead/Lag Controller is used by the telecommunications industry to maintain the efficiency of air conditioning systems in remote enclosures.
- The new Intelesite Control System from Sierra Monitor Corporation now sets the standard for cost effectiveness and reliability either in retrofits or new construction.

Sierra Monitor continues to be the innovator in facility control and monitoring systems in the industry.

In addition, Sierra Monitor has been a leader in plant-wide gas detection systems, including design and production of the most advanced microprocessor controlled gas detection system in the industry, the Sentry. The FieldServer Technologies division of Sierra Monitor is the leading provider of communications gateways in the building control and automation industry. ProtoCessor from FieldServer Technologies enables Sierra Monitor telecommunications facilities controllers to communicate over a variety of common protocols to Network Operations Centers.

Intelesite is the culmination of Sierra Monitor's monitoring and environment control expertise with the data communications expertise of FieldServer providing an innovative, distributed solution enabling the telecommunications industry to at once monitor and manage remote site-critical support elements to ensure network integrity and security as well as system reliability.
