## For Immediate Release

# Sentry WebServer

February 25, 2003 -- Sierra Monitor Corporation proudly announces the new **Sentry WebServer**. Sentry WebServer captures the imagination of safety managers and instrumentation engineers by combining the power and flexibility of the Sentry Gas Risk Management System with the interoperability strength of the FieldServer WebServer from FieldServer Technologies. The reliability of a proven gas detection system is combined with the modern technology of the web.

The new **Sentry WebServer** provides the user with a cost-effective, easy-to-use graphical display of the hazardous gas conditions simply by using a familiar web-browser. The user no longer has to find a gas detection system that might have a serial output and then search for a suitable graphical user interface package that might work with that system and then have to learn how to configure and use the package or hire a consultant to do the work. Now, from a single source supplier, Sierra Monitor, the user can accomplish it all with one system.

- Safety data presented visually on any PC of your choice located anywhere in the plant or even remotely
- Complete interaction with the hazardous gas detection system through a familiar web browser without needing to learn a new GUI program
- Ability to web-browse to system data from your LAN, WAN or over the Internet
- Easy to configure graphical color changes as events occur to quickly and easily determine alarms and status changes
- All your current alarms dynamically displayed on a single web page
- An event log included as standard to easily access history for due diligence
- Cost-effective system with the ActiveX tools needed to configure using readily available Front Page from Microsoft
- The full system available from a single supplier with an outstanding reputation for before and after sales technical support
