

## Overview

The ProtoCast wireless gateway is a compact, high-performance, fully-configurable, cost-effective gateway that allows any Modbus, analog and digital device interface to communicate to the SMC Cloud via Wi-Fi for device management, control, alarming and diagnostics.

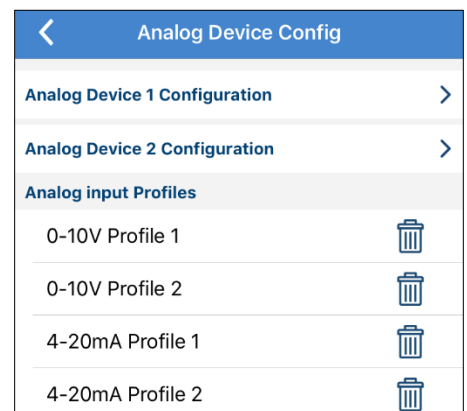

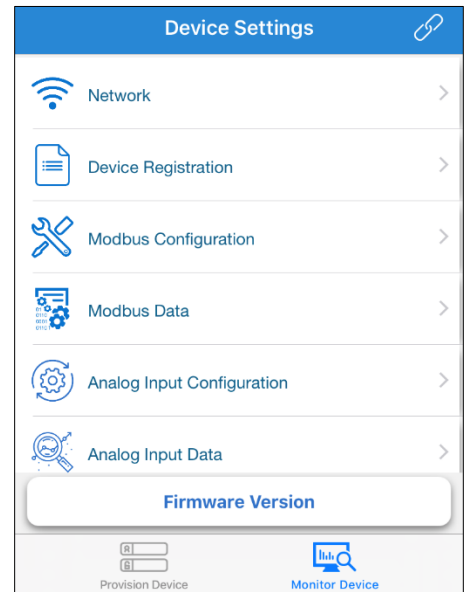

The ProtoCast App<sup>1</sup> gives users on-the-go control, making it easy to set-up and perform diagnostics including determination of status, network settings, node information and more. OEMs can use the ProtoCast's Wi-Fi Access Point to monitor their device data from ensure all assets are performing correctly.

The ProtoCast App is free and available on the Apple App Store or Google Play.

Download ProtoCast App today!

## Benefits of the ProtoCast App

- Register, configure, diagnose and Monitor ProtoCast connected equipment from any mobile device (within Wi-Fi range of ProtoCast).
