

Overview

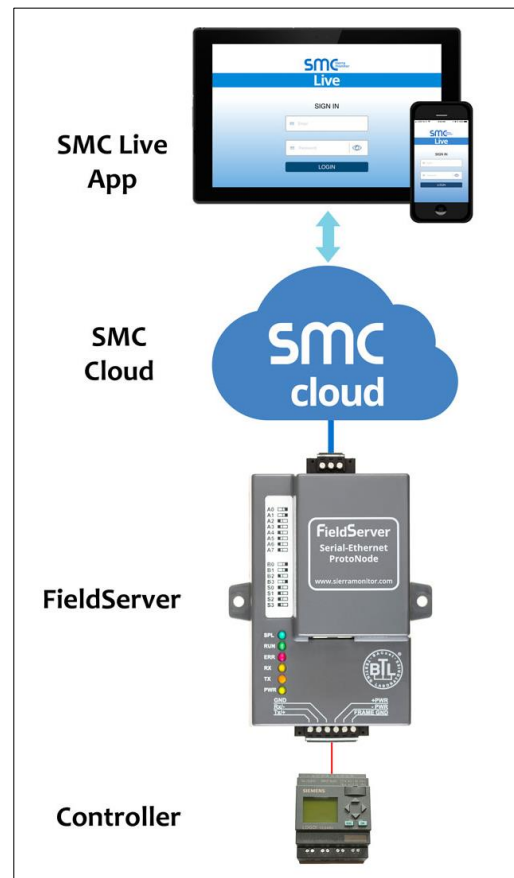

Sierra Monitor’s SMC Live App¹ interfaces with the SMC IoT Cloud Platform to give users instant access to view data from cloud-registered SMC Gateways. OEMs and their customers can securely access and remotely monitor their device data from any location to ensure all assets are performing correctly.

The SMC Live App can display data visually with an easy to use graphing feature for a concise understanding of the device’s function and status. The SMC Live App is free and there is no annual subscription² for the OEM’s equipment to be connected to the IoT Cloud Platform.

Download SMC Live from the Apple App Store or Google Play today!

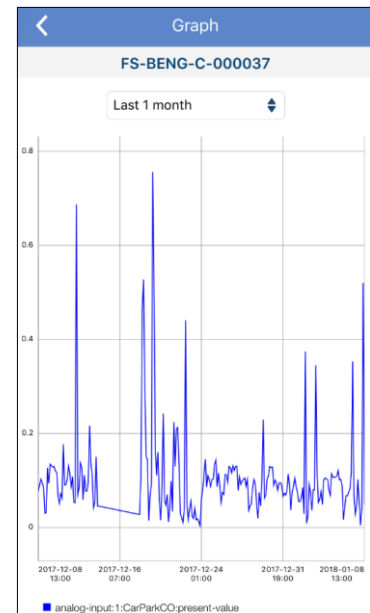

Benefits of SMC Live

- Monitor equipment connected to the cloud through the SMC Cloud’s secure portal, reducing field truck expenses.
- Retrieve data from the cloud for analysis (for up to a year of data per device).
- Fully scalable. SMC’s Cloud Platform is built to facilitate growing customer demands.

¹ The SMC Live App is supported on Android OS 4.4 or higher and iOS 10 or higher.

² Cloud data storage only incurs cost to the customer if the limit of 50 data points (per FieldServer) every minute for 30 days is exceeded.
